Max McManus

IT SUPPORT / SYSTEMS & INFRASTRUCTURE / AUTOMATION

Groton, MA | maxcarlinmcmanus@gmail.com | maxmcmanus.dev | github.com/MaxAxe0

PROFESSIONAL SUMMARY

Electrical and Computer Engineering student combining hands-on IT systems experience with professional DevOps automation. Built production health checks with Playwright, Harness CI/CD, and Kubernetes; independently develops Python/Docker applications and maintains a Linux homelab with Proxmox virtualization and NAS storage.

TECHNICAL SKILLS

Systems & Hardware: Windows, macOS, Linux, PC assembly and troubleshooting, Proxmox VE, NAS configuration, Cisco Packet Tracer

Tools & Platforms: Harness CI/CD, Kubernetes, Docker, Azure SQL, Git/GitHub, Jira, Jamf, PagerDuty

Programming & Automation: Python, TypeScript, C#, Playwright, automated testing, Gmail API integration

PROFESSIONAL EXPERIENCE

DevOps Engineer Intern

Jun 2026 - Aug 2026

CDK Global | Austin, TX

- Developed TypeScript and Playwright health checks from scratch to automate application monitoring across multiple customer-facing CDK software products.
- Independently configured a Harness CI/CD pipeline to run health checks on Kubernetes infrastructure and deployed the system into production, where it continued operating after the internship.
- Automated Microsoft Teams notifications for health-check results and targeted email alerts on failures, routing issues to responsible personnel.

Product Flow Shift Lead

Oct 2023 - Sep 2026

Best Buy | Nashua, NH

- Processed customer orders, purchase orders, shipments, and inventory records using internal POS and legacy systems in a high-volume environment.
- Led closing operations as a keyholder, coordinating team workflows and resolving day-to-day operational issues.

TECHNICAL PROJECTS

Alfred - Local AI Assistant

Python | Ollama | Docker | Gmail API | github.com/MaxAxe0/Alfred

- Developing Alfred, a local-first personal AI assistant designed to perform everyday computer tasks through extensible tools while keeping users in control of sensitive actions.
- Built the Python/Ollama application with Gmail API integration and sandboxed file operations, implementing explicit user approvals, access limits, and overwrite protection.
- Containerized the application with Docker and developed automated tests covering tool execution, security safeguards, and error recovery.

Personal Homelab & PC Builds

Linux | Proxmox VE | NAS

- Deployed and configured Proxmox VE and NAS storage in a personal Linux homelab, including storage setup and network access.
- Built and configured custom desktop PCs, troubleshooting hardware installation and system setup.

EDUCATION

Middlesex Community College

2025 - Present

Electrical and Computer Engineering coursework | Lowell, MA
